

Attractive as Ornamentals and Prolific Fruit-Bearing, too!

To meet consumer demand, Monrovia continues to add to its edible line with delicious new offerings with something for all climate zones and taste buds. We are pleased to partner with another outstanding breeder, Fall Creek® Farm and Nursery, to bring you three exciting selections from their new BrazelBerries™ collection. This breeding program focuses on berry varieties that are easy to grow, with exquisite ornamental qualities and amazing fruit. Each selection has successfully passed rigorous trialing across many geographic regions and growing situations.

Tired of dealing with thorny rambling Raspberry bushes? Raspberry Shortcake™ is a revolutionary thornless dwarf Raspberry that is well-suited for large containers. It requires no staking, no companion pollination, has sturdy upright canes and provides plenty of tasty berries. If you are looking for striking foliage color in a compact form, new Blueberry Peach Sorbet™ is a four-season show stopper. Foliage emerges peach, turning pink, then orange and finally emerald green. Perfect as a small hedge or container plant. And despite its diminutive size, super dwarf Blueberry Jelly Bean™ is a prolific producer of juicy fruit in mid-summer, with attractive red-tipped foliage.
