

Edible Collection

Our Easy-to-Grow Edibles are Pretty and Delicious

Edibles continue to be in high demand from consumers and Monrovia has responded with an ever-growing array of easy-to-grow edibles. We have 18 of the best varieties of Blueberries, including those for both the colder and warmer regions of the country. We're growing many other tasty berries, too, like Raspberry, Blackberry, Gooseberry, Huckleberry and Lingonberry. Great improvements have been made in these fruit varieties...many are thornless, have longer fruiting times and improved sweet, juicy flavor. We have a fantastic new Strawberry called Seascape, which is a cross of two favorite varieties, Selva and Douglas. It is disease resistant and produces a fantastic crop of large, sweet berries.

Our new Honey Crisp Apple was developed by the University of Minnesota's prestigious Apple breeding program. Its large red fruit has an exceptionally crisp texture. Many of the Apple, Peach, Pear, Cherry, Plum and Pear trees we grow are smaller-sized, yet still produce an abundance of fruit, many with lower chill requirements.

Citrus, with its glossy green foliage and fantastic fragrant flowers, produces an ample crop of Oranges, Grapefruits, Tangerines, Lemons, Limes and Kumquats. We grow many dwarf varieties that perform beautifully in a container and thus are easy to overwinter in colder regions.
