

All Our Plants are Distinctively Better® — Here are a Few Standouts for 2013

We grow each of our 2,300 plant varieties in customized soil mixes to develop a strong root system and ensure a healthy plant that will flourish in the landscape. We have introduced hundreds of improved plant varieties that are bred to be more pest and disease resistant and with improved characteristics such as increased flower or fruit production, or unique color or shape. Here are some of our new favorites!

With its striking golden-yellow needles and unique dwarf spreading form, Feelin' Sunny™ Deodar Cedar is a treasure! It was discovered by one of our Craftsman at our Oregon nursery as a sport of Feelin' Blue,™ chosen in 2005 for its outstanding blue color by the noted plantsman, the late Monrovia Craftsman Cliff Comstock. Its interesting, irregular growth habit makes a wonderful specimen for smaller spaces, rock gardens and containers.

Who doesn't love the gorgeous flowers displayed on deciduous Magnolias? Rose Marie Magnolia does not disappoint with its exquisite, large flowers that are a bright pink on the outside and a softer pink on the inside. It is very floriferous with an exceptionally long bloom season, making a spectacular specimen or accent.

Flower Carpet® Rose 'Pink Splash' is the latest in the series of Flower Carpet Ground Cover Roses. It bears masses of spectacular bi-colored pink flowers from spring through fall. Like its brothers and sisters, it has glossy green foliage, is simple to maintain, exceptionally disease resistant, and doesn't require spraying.
