

Monrovia Packaged Soils and Fertilizers

Formulas Plant-Buyers Rely on...Now Packaged For Home Use!

One key reason our Distinctively Better® plants are so healthy is the soil we use. And savvy gardeners know how important it is to amend the soil in their own yard, and to choose rich potting soils for their containers. We have two product lines to meet the consumer demand.

Monrovia's Custom Soil Blend and Soil Amendment are based on the core blend we use at our growing grounds, but packaged in convenient sizes for home use. Our Custom Soil includes compost, slow-release fertilizer and mycorrhizae, a beneficial fungus that improves a plant's tolerance to transplant and drought stress.

The Monrovia Organics® line is only available at independent garden centers and includes a potting soil, planting compost, and seven plant-specific fertilizers, each made from 100% natural ingredients. The Organics soils include a special recipe of compost, 12 different strains of mycorrhizae, plus a fast-acting organic fertilizer to get plants off to a healthy start. Our organic fertilizers are made from 100% natural and organic ingredients, including our proprietary mycorrhizae blend. Unlike most other organic fertilizers, each Monrovia Organics product is granulated for uniform quality and ease of use. We offer an All-Purpose Fertilizer, Vegetable & Tomato Food, Flower & Rose, Tree & Shrub, Fruit Tree & Vine, Azalea & Camellia, and a Starter Fertilizer.

Monrovia Packaged Soils and Fertilizers
