

## Easy-Care Color that Gardeners will Love!

This Winner of the Chelsea Flower Show's 2011 Plant of the Year Award, 'Anemone Wild Swan™' P.P.# 23,132, has large pure white flowers with chartreuse stamens that nod high above the stems. The back of the elegant blooms are lilac-blue. This variety has a longer flowering season than other Japanese Anemones, and is still dazzling when other Anemones have stopped blooming. This hybrid between *Anemone rupicola* and *A. hupehensis*, forms a desirable compact clump.

Another renowned plant breeder, Bruce Meyers, brought us two colorful hybrid Penstemons, selected from crossing Mexican and American native Penstemons. Red Rocks® Penstemon sports a succession of tall showy spikes of bright rose-red flowers all summer long. This lovely hybrid is a Plant Select® winner and is named after Denver's famous amphitheater which was carved out of the spectacular red sandstone cliffs nearby. Pikes Peak® Purple Penstemon has violet-purple flowers and narrow, dark green leaves forming an attractive mound. Both new selections thrive in a wide range of sites and soils and are very drought tolerant.
